

MOBILE VERSION

STORETOTALS DISPLAYS THE IMPORTANT ACCOUNTING DATA YOU NEED AT THE LEVEL OF DETAIL YOU WANT.

StoreTotals displays the important accounting data you need at the level of detail you want. Through a user friendly browser interface, StoreTotals offers accessibility to real-time and historical accounting information.

Originally developed for the IBM 4690 ACE and Supermarket sales applications, all accounting totals for the store, departments, cashiers, cashiers' department groups, exception log data, and item movement are now easily accessible through EDJ's StoreTotals application.

By recording historical data, users are able to compare important accounting information for selected date ranges between stores, cashiers, department groups, etc. in order to view trends and track performance over time.

StoreTotals is also commonly used by loss prevention personnel who utilize

the real time display, monitoring specific operators and department totals to view the data as it's happening.

BENEFITS:

- View accounting data which is typically difficult to access.
- Compare historical accounting data by the store, departments, cashiers, cashiers' department group, etc.
- Monitor accounting data real time.
- Customize your browser view to see the type of data important to your company.
- View accounting data from mobile devices -- great for regional and district managers.

ACCESS YOUR REAL-TIME AND HISTORICAL ACCOUNTING DATA FROM YOUR MOBILE DEVICE

- No longer a need for large IT staff to retrieve store accounting data

MOBILE VERSION:

With the new mobile version of StoreTotals, user permissions can be customized to grant specific access for regional, district, and store managers to view the information relevant to them on their iPad or tablet device.
